Discs for raised beds

[JPEG - 97.8 KB]

Two discs fixed on a leg, attached to the Tool bar thanks to two U clamps or horizontal and perpendicular clamps. It is possible to set the height and the distance between the discs in order to do so the width and the height of the raised beds.

This is a fundamental tool, especially for draft animal agriculture, because once the beds are raised the animals naturally follow the furrow. Leading them is then way easier, and the path more regular.

Use : raised beds creation and maintenance, earth up...

| Weight | Tool width | Worked strip width | Discs diameter |
|--------|------------|--------------------|----------------|
| 28 kg | 900 mm | 540 à 840 mm | 450 mm |
